Bring the **start**
We bring the **up**

Bring the **start**. We bring the **up**.

This is the claim to highlight our role in the start-up ecosystem, both in France and internationally. It reflects the commitment of Orange and all our employees to supporting start-ups in developing their services and growing their businesses.

- At **Orange Innovation**, we help start-ups accelerate by integrating them into our tech ecosystem.
- Through **Orange Ventures**, we are helping to finance innovative start-ups, with €350 million now directly committed.
- At **Orange Business**, we help start-ups get to market and scale up by linking them with our products and services for enterprise customers.

Our innovation strategy is based on Open Innovation, a model that encourages collaboration with start-ups, developers, academic institutions and industrial partners to bring together the worlds of tech and telecoms. In the face of technological disruption, rapidly changing customer needs, and the emergence of new business models, this collaborative approach to innovation represents a valuable competitive advantage.

The principle that guides our actions with start-ups is to detect and accelerate those that contribute to our core business through local, national, and international programs.

"Bring the start, we bring the up" sums up the win-win relationship between Orange and start-ups, which is based on a shared vision of innovation. This value is rooted in the innovation, dynamism, and agility that start-ups bring us and in the value we bring them by making our networks, technology, and expertise available. This position enables us to develop a shared vision of innovation with our start-up ecosystem, which we will demonstrate at Vivatech.

Trusted Business

Discover innovative solutions designed to meet the operational and strategic challenges faced by businesses. Start-ups offer tools and platforms that optimise internal processes, improve operational efficiency and boost competitiveness. Others are using artificial intelligence, data management and digitalisation solutions to disrupt traditional ways of working. These innovations aim to automate repetitive tasks, simplify resource management and provide immersive training to develop management skills, for example. Finally, some start-ups are focusing on sustainability and environmental impact, offering solutions for energy management and e-waste recycling, contributing to both operational efficiency and corporate social and environmental responsibility.
